SUMMARY

Computer Science undergraduate who builds AI systems and ships them to production: agents that take real actions under human approval, multi-tenant backends, and retrieval pipelines that refuse to guess. Winner of Freshworks' **Great Agent Hackathon** (Sep 2026); sole engineer on OmniFlow AI, a live multi-channel product.

EDUCATION

B.Tech, Computer Science — Presidency University, Bengaluru

2024 – 2028

ACHIEVEMENTS

- **Winner — The Great Agent Hackathon, Freshworks** (Bengaluru, 25–26 Sep 2026), Track 3: AI-native Enterprise, with SentinelOps AI.
- Cleared Round 1, GradSkills Compete & Win: Summership 2026 (May 2026) · be10x AI Tools Workshop certificate (Mar 2026).

PROJECTS

SentinelOps AI | AI SRE agent with human-approved remediation

Winner · Freshworks

Python · FastAPI · Claude (tool use) · Kubernetes · Prometheus · Supabase · Freshservice API + MCP · React

- Detects Kubernetes incidents from Prometheus error ratios every 15 s, then investigates with Claude in a bounded tool-use loop over **9 read-only tools** (≤ 14 calls, $\sim \$0.05$ per investigation); conclusions that don't cite evidence are rejected.
- Every fix becomes a **Freshservice change request** and runs only after human approval, chosen from a fixed 4-action catalog through a least-privilege ServiceAccount that cannot create, delete or read secrets; verifies recovery for 2 min and **rolls back automatically**.
- Tamper-evident, **hash-chained audit log** in Postgres; phones the on-call engineer via Vobiz + Sarvam voice.

OmniFlow AI | Multi-channel AI customer-communication platform

omni-flow-ai.vercel.app

Next.js · React · FastAPI · SQLAlchemy/Alembic · Supabase Postgres · Groq LLMs · Meta Graph API · Plivo · Clerk

- Built and run solo in production: **750+ commits, 1,500+ backend tests**. WhatsApp, Messenger, Instagram, email and a web widget flow into one inbox, with AI replies grounded in each business's knowledge base and refusals when no source supports an answer.
- Multi-tenant data isolation with **Postgres row-level security** under a non-superuser role; diagnosed pooler-mode tenant-context loss and moved to session pooling; migrated production to Supabase.
- AI voice agent on Plivo that **transfers live calls into a human agent's browser**, with signed webhooks and durable call audio; plus leads pipeline, AI form builder, bookings and Google Sheets sync.

Sangam | Citizen voice joined with public data

sangam-eight-blue.vercel.app

FastAPI · Supabase (pgvector, PostGIS) · Gemini · Sarvam · React · Leaflet · Telegram/WhatsApp · Google Cloud Build with AI

- Takes multilingual voice, photo and text reports over Telegram, WhatsApp and web; groups them by place and need, and **joins them with official statistics** (Jal Jeevan Mission tap coverage, 30 districts / 228 blocks of Karnataka) to flag delivery gaps.
- Ranking is plain arithmetic; Gemini only explains, and **code rejects any AI-written number** not in the sourced facts.

Baseline | Lab-report history that notices trends

AWS × WeMakeDevs

Python · AWS S3 · DynamoDB · Strands Agents · Gemini · PWA · English / Kannada / Hindi

- Photo of a lab report → model extracts values → tested Python computes trends → plain-language summary in 3 languages. Design rule: **the model reads, code decides, the model explains**. 320+ tests; built in 48 h with a teammate against a versioned API contract.

NexusFlow | Autonomous multi-agent app builder

[Live demo](#)

React · TypeScript · FastAPI · PostgreSQL · ChromaDB · Groq

- Generates full-stack apps from a plain-English brief; a DebuggingAgent with **27 deterministic repair rules** and 10 static checks fixes LLM output without another model call, boots the app to verify it runs, then pushes to GitHub.

CV Risk Detection | Defect detection for supply-chain QA

[github](#)

- MobileNetV2 transfer learning on magnetic-tile defects, **86.96% validation accuracy**; FastAPI + React dashboard.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL

AI / ML: LLM agents & tool use (Claude, Gemini, Groq), MCP, RAG, pgvector, ChromaDB, TensorFlow, transfer learning

Backend: FastAPI, SQLAlchemy, Alembic, Node.js, Express, Spring Boot, REST, webhooks, pytest

Data & Infra: PostgreSQL (row-level security), Supabase, MySQL, MongoDB, Docker, Kubernetes, Prometheus, AWS (S3, DynamoDB), Vercel, Render, Railway

Frontend: React, Next.js, Tailwind CSS, shadcn/ui, TanStack Query

Profiles: LeetCode · HackerRank **Spoken:** English, Hindi, Kannada
